

India's data protection wave is here, and most companies are not ready.

Key DPDP obligations take effect May 2027, and sectoral regulators have already imposed live, enforceable data obligations with no transition period. Privra makes Indian businesses that process sensitive personal data (financial, health, children's) compliant through AI agents that discover privacy gaps, implement fixes, and monitor continuously, delivering compliance as an outcome, not another dashboard.

May 2027

KEY DPDP OBLIGATIONS
EFFECTIVE

50,000+

POTENTIAL MID-MARKET
BUSINESSES

THE PROBLEM

- Products evolve faster than privacy reviews. Manual audits take months and are outdated on delivery.
- Most Indian startups run outdated GDPR-template policies with no lawful basis under DPDP.
- Existing tools generate reports and dashboards, not actual implementation.
- Companies under 200 employees have no internal privacy function to do 9–12 months of work.

THE SOLUTION

A multi-agent AI system that continuously audits products, infrastructure, and consent flows. AI performs roughly 80% of the work; human experts validate the judgment-intensive 20%. Clients receive policies, implementation, and continuous monitoring, verified before delivery.

TARGET CUSTOMERS

- **Financial data:** fintech, lending, payments, insurance, wealth platforms.
- **Health data:** healthtech, diagnostics, telemedicine, claims platforms.
- **Children's data:** edtech and platforms serving under-18 users (DPDP Section 9).

BUSINESS MODEL

Annual enterprise subscription

Privacy implementation and continuous monitoring, priced by organization size and compliance complexity. Recurring, high-margin.

One-time engagements

DPDP assessments, implementation, and remediation projects.

WHY NOW

Notified

DPDP Rules notified Nov 2025. Key obligations take effect May 2027, 18 months later.

Live

Sectoral regulators have already imposed enforceable data obligations with no transition period.

Unready

Most Indian businesses handling sensitive data have no internal privacy function.

WHY PRIVRA

- **AI-native implementation:** executes remediation, not just assessments.
- **India-native regulatory logic:** built for DPDP and India's sectoral data rules.
- **Continuous compliance:** monitors change after implementation, not point-in-time.
- **Expert-validated output:** AI handles scale; experts validate judgment-heavy work.
- **Outcome-driven:** compliance delivered, not just a dashboard.

WHAT MAKES US HARD TO REPLICATE

- **Proprietary compliance intelligence:** 450+ Indian audits capturing real compliance failures, edge cases, and remediation patterns that inform our AI agents.
- **Regulatory-native AI:** multi-agent architecture encoding DPDP and India's sectoral data logic, not generic compliance bolted onto GDPR.
- **Trust-center network effect:** each client's public compliance page becomes an organic acquisition channel.

TRACTION & ROADMAP

- 450+ audits and 50+ founder interviews validating the problem.
- MVP built: infra scanner, scoring engine, browser agent, policy generator.
- Active design-partner and pilot conversations underway.
- Next 6 months: production platform, first paying customers, founding team.

FOUNDER

Shreyas Jain, CS undergraduate, VIT. Technical background in ML, LLMs, AI agents, and cloud systems. Prior SaaS builds (Foreman, Sentinel). Actively building the founding team: technical and compliance cofounders in progress.
